

PHILIPS

Early intervention and
response solutions

Prepare for the unpredictable

At COVID-19 vaccination locations, patient safety is critical

Care teams need to be ready to address a diverse population with unknown health concerns, while being able to account for any potential adverse reactions to the vaccine. They need to prepare for the unpredictable.

Providing care teams with the ability to identify individuals exhibiting signs of stress may help reduce anxiety for both caregivers and patients.

Vaccines can provoke a severe allergic response known as anaphylaxis¹, which can lead to cardiac arrest in some cases.

Care teams need to be able to quickly assess and react to situations on site, which may help to ease the burden for hospitals already overwhelmed by COVID-19 patients.

Through smart solutions, Philips provides the assistance you need to support patient safety during COVID-19 mass vaccination programs. Onsite care teams can then:

- **Identify** and assess the immediate health needs of individuals
- **React** to anaphylactic shock and cardiac arrest
- **Reassure** recipients by equipping them with tools to remotely track for adverse reactions to the vaccine

Our bundled solutions focus on assessment, response and reassurance so you can prepare for unexpected situations with confidence.

Support your immediate needs, and the demands of the future

The Philips solution for early intervention and response

Reassure

The **BioButton™ COVID-19 Screening and Vaccination Monitoring Solution** provides continuous monitoring of temperature, heart rate, and respiratory rate at rest with clinical accuracy. This is a scalable and cost-effective way of providing peace of mind for those who may be concerned about receiving the vaccine.

Respond

The **Philips Heartstart FRx** defibrillator features intuitive, step-by-step voice instructions, including CPR guidance and an audible metronome. This helps guide basic life support (BLS) responders while treating a suspected sudden cardiac arrest (SCA).

Assess

The **Philips EarlyVue VS30** vital signs monitor includes automated Early Warning Scoring (EWS) to help you quickly pinpoint subtle signs of deterioration, and confidently decide on appropriate, proactive care.

Bundle contents²

For vaccination centers estimating 1,000 individuals daily

For vaccination centers estimating up to 5,000 individuals daily

	For vaccination centers estimating 1,000 individuals daily	For vaccination centers estimating up to 5,000 individuals daily

HeartStart FRx defibrillator	1x	1x

- 1 month of supplies
- Clinical instruction short guide and training manual. Additional clinical education programs also available.
- Pre-configured equipment (ready to use)
- Standard product warranty

Part of a bigger picture

Any investment you make in patient monitoring solutions to address the COVID-19 pandemic needs to work for the longer term, too. Our solution for early intervention and response includes equipment thoughtfully selected to provide a path to continued value and use, beyond the vaccination period.

Your organization may require a customized approach. Contact your Philips sales representative for help determining the right solution so you can prepare for the unpredictable.
