Every respiratory measure matters

Sustainable, quality care in general care

Early detection is vital

The power to prevent the 3rd leading cause of death in the United States is in the form of measurable, incurred and indiagnosed.

The most common predictor of cardiac failure is respiratory distress.

Respiratory rate is a significant indicator of the respiratory rate.

Increasingly more difficult

The incidence, staff awareness and mortality of patients at risk on general wards.

More pressure on nurses and staff

Better respiratory monitoring practices are more important than ever.

Every year, two 747s crashing every day.
