PHILIPS

Clinical Collaboration
Platform

# Connect.
# Communicate.
# **Collaborate.**

**Real-time sharing of data and images
for all enterprise stakeholders**

# **Support** healthcare and business needs

Every enterprise and department has invested in a technology infrastructure to enhance patient care. Philips Clinical Collaboration Platform provides a scalable, modular architecture that integrates with existing systems to deliver data and tools across the enterprise – from clinical data reporting to enterprise-wide ingestion and archiving, to full patient and clinical data management.

## Build smarter, more productive relationships

Philips solutions and services unify enterprise imaging across sites, specialties and technologies to simplify medical image management, enable effective collaboration and enhance patient care.

Philips Clinical Collaboration Platform is a modular, multi-site, multi-domain standards-based Enterprise Imaging solution. Its shared back-end architecture provides the backbone for a fully integrated clinical imaging, workflow and reporting infrastructure.

The Clinical Collaboration Platform enables real-time, on-demand access to holistic clinical data for those involved in the care journey, including the patients.

## Accommodate multiple specialties

Primary care

Dermatology

Radiology

Laboratory

Cardiology

Emergency

Endoscopy

Telemedicine

Pathology

Ophthalmology

# Improve **efficiency** and the patient experience

Give physicians and administrators the clinical data and image access they need to improve care and reduce costs. Encourage patients to take more control over their healthcare. Simplify clinical reporting to payers for more efficient reimbursement. Provide the right data to the right people at the right time. Promote true collaboration using clinical data embedded seamlessly in your existing EMR ecosystem – and bring stakeholders together in a shared mission to deliver a higher standard of care.

## Advantages at a glance

- Access to relevant clinical images for each specialty and the patient's comprehensive medical history from the EMR helps clinicians work together for better-coordinated care.

- Patients gain access to their images and exam reports, allowing them to help physicians develop more efficient evaluation and treatment plans – and feel greater ownership in their own care.

- The ability to manage clinical data holistically gives administrators greater agility for mitigating risk and planning for the future.

- Data-mining relevant information and business insights via real-time dashboards and other compliance and reporting systems supports performance tracking and process improvements, and boosts quality and productivity outcomes.

# **Connect**
# physicians, payers, administrators and patients

Philips Clinical Collaboration Platform establishes an interoperable clinical data ecosystem – connecting professionals with the imaging data they need across the continuum of care. This modular, multi-site, multi-domain standards-based Enterprise Imaging solution enables real-time, on-demand access to holistic clinical data for those involved in the care journey, including the patients.
