Mask Selector 2D
DreamWear fit packs

Philips takes the guesswork out of remote setups

These days, a proven solution for remote setups is crucial to your success. When it comes to masks, you need the right fit from the start. With Philips DreamWear fit packs or Mask Selector 2D, you have everything you need to help your patients find the mask that's right for them from the convenience of their homes.

Mask Selector 2D helps get your patients the right fit, right from home

When fitting a patient remotely, Philips Mask Selector 2D is a convenient tool to find right mask type and fit. It helps deliver an accurate, personalized mask recommendation simply by using the patient's cell phone, tablet, or computer. Mask Selector 2D asks the patient a few questions about themselves and their sleep habits and uses the camera to take a single picture of their face.

Rooted in science and data, it features a proprietary algorithm based on over 10 years of facial scanning research and built on a wide range of ethnicities and geographies to determine an accurate, precise CPAP mask recommendation.

DreamWear fit packs let patients choose their most comfortable cushion

If your business doesn't participate in the Mask Selector 2D program, DreamWear fit packs are the perfect option for remote mask fitting. Fit packs include all available cushion sizes for full face, under-the-nose nasal or silicone pillows (S, M, L and MW), a medium frame and headgear. And, with DreamWear's unique modular frame design, setup is made even more efficient by enabling patients to easily swap between cushion sizes to find the proper fit.

Modularity makes setup simpler

If patients require a different cushion type, DreamWear's unique modular design makes switching between them easy.² Whether a patient is fit on a full face, under-the-nose nasal or silicone pillows cushion and needs to try another cushion type, DreamWear's modular design makes it possible to switch without changing masks.^{1,2} DreamWear is the only modular mask system that allows you to switch between full face, under-the-nose nasal or silicone pillows and has comparable sizing across all three cushion types, helping you save time and money if a patient needs to switch.²

¹The DreamWear modular mask system is mask frame that accommodates nasal, pillow, and full face cushions and associated headgear. Priced separately.

²Switching from a nasal cushion or silicone pillows cushion to a full face cushion requires different headgear and instructions. Consumers must consult their provider before making adjustments.
