monitoring solutions

IT services

# Count on us as your patients count on you

**Philips Network Assessment** –  
the simple, and effective approach to assessing  
& providing guidance to patient monitoring networks

**Technology is fundamentally changing the way healthcare is delivered. Today, healthcare IT networks capture data from an ever-increasing number of disparate sources, making them increasingly complex to manage. IT managers must now build scalable networks that connect traditional IT with new technologies across an expanding set of care areas – ultimately ensuring they leverage data to generate meaningful insights for caregivers and the patients they serve.**

For decades Philips has been building patient monitoring networks to carry life-critical data to help you better observe your patients. We understand your healthcare IT environment and we're committed to supporting your evolving networking strategy.

Every year we perform more than 8000 installations in North America alone and recognize the importance of truly collaborating with health care organizations like you – our success in this regard is underlined by top rankings in IMV ServiceTrak™ customer satisfaction reports.

Our Philips Network Assessment enables the seamless integration of IntelliVue patient monitoring components across your IT infrastructure – enabling compliance to security and data transfer requirements for both wired and/or wireless network infrastructure.

With us taking care that patient monitoring solutions are well integrated with your network infrastructure you can focus on what really matters – **delivering better care, to more people, at lower cost.**

## Overview of Philips Network Assessment

### Process in short

- Baseline Network Assessment
- Network Design Consultancy
- Functional Test and Verification

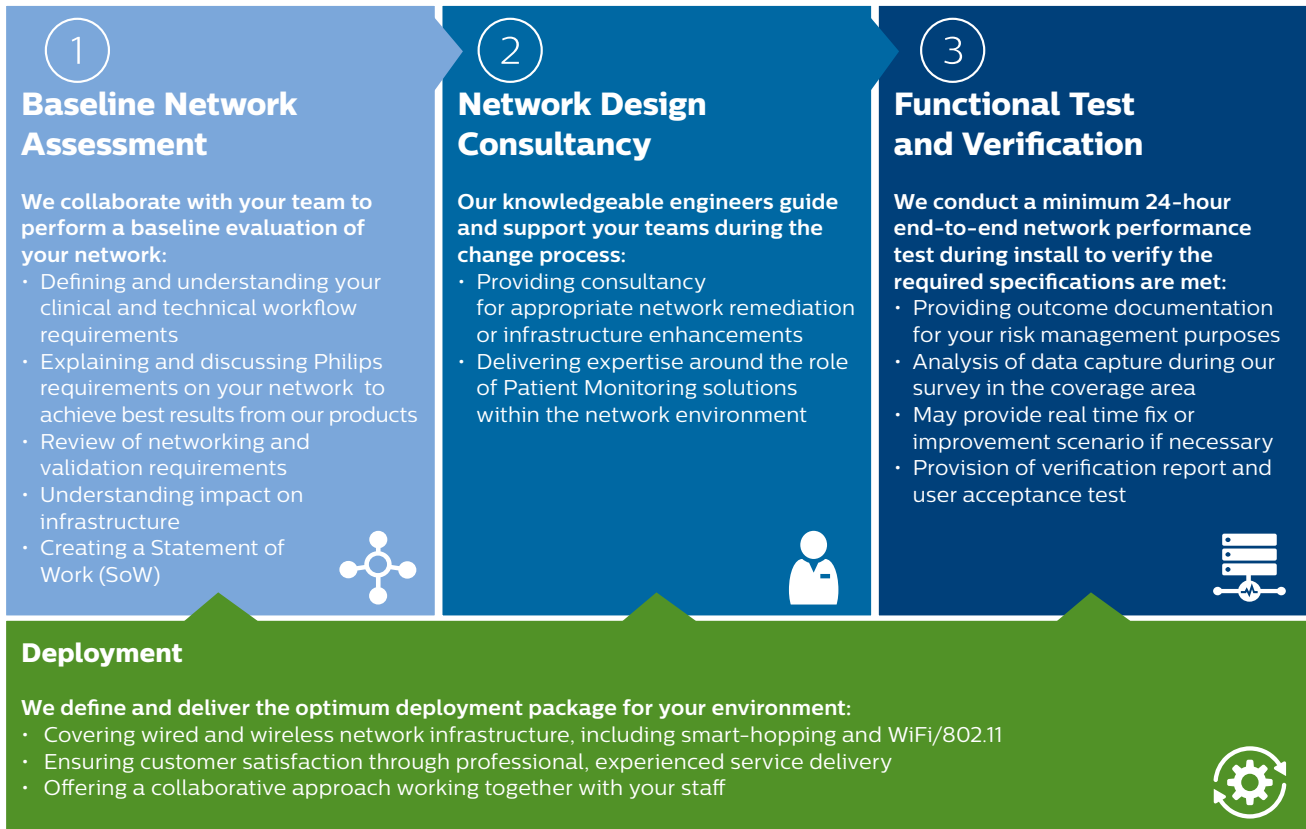

### Key technical facts

- Philips Network Assessment are based on IntelliVue Network Specification – aligned to IEC/ISO/AAMI 80001-1
- Supports Smart-Hopping in 1.4 GHz or in 2.4 GHz wireless networks
- Supports 802.11 a/b/g/n wireless networks

## How **Philips Network Assessment** is delivered

Philips Network Assessment is provided through technical assistance and knowledge transfer from our experienced Philips service personnel, who work together with your teams. Philips Network Assessment delivers a smooth and reliable end-to-end implementation of Philips components within your environment, and is achieved in three stages;

## The impact of **Philips Network Assessment**

Philips Network Assessment provides fast patient-care by enabling secure access to health information where and when it is needed:

### Always there, always on

- Philips Network Assessment gives you the confidence that your patient monitoring equipment will perform consistently, day-in, day-out
- Our easy implementation process gives you quicker access to the clinical applications and systems you and your patients need

### Understanding your needs, designed for you

- We work to identify and reduce potential gaps that can have a negative impact on the performance of your network
- May improve IT network performance and can support and optimize clinical workflow

### Balancing risk, increasing the return on your investment

- By optimizing the use of your network infrastructure, you increase the return on investment from your patient monitoring technology
