Clinical Alarm Dashboard service*

Provides the power to make informed, data-driven decisions about your hospital's alarm program. Our certified Philips data analysts – with competencies in data visualization tools – can help you configure the data set you need for actionable, at-a-glance insight on your alarm program. Now you can set alert protocols and parameter limits with confidence and make sure alarms are heard by the appropriate care providers. Add our Dashboard service to your management solution for a comprehensive, holistic way to reduce alarm fatigue. To learn more, contact your Philips Sales Rep.
