* All-in-one solution combines Android and Windows 10 Professional. Available on the C-Line 8051C.

Designed for collaboration

Empower the team

The best ideas are formed when everything feels natural. The Philips C-Line is intuitive in every way, allowing your team to think and collaborate freely. Meetings run more smoothly with instant wireless or wired connectivity from multiple sources, whilst a convenient touchscreen makes any brainstorm even smarter.

CMND & Control

Run your display network over a local (LAN) connection. CMND & Control allows you to perform vital functions – whether day-to-day maintenance, configuring updates, controlling inputs or monitoring display status. Whether you're in charge of one screen or 100.

CMND & Create

Take control of your content with CMND & Create. A drag-and-drop interface makes it simple to publish your own content – whether it's daily results or branded corporate information. Preloaded templates and integrated widgets ensure your stills, text, and video will be up and running in no time.

OPS Slot

Integrate a full-power PC or Android-powered CRD50 module directly into your Philips display. The OPS slot contains all the connections you need to run your slot-in solution, including a power supply.

Video conferencing

The built-in video conferencing feature enables quick, reliable and easy video calls with single or multiple contacts. Simply connect a compatible camera and use the included software, or connect via third party apps such as Skype, Hangouts, Microsoft Teams and many others to make your calls.

HID Capacitive with USB Plug-and-Play

Experience a better way to control your content. Simply plug in your existing laptop or desktop to enable touch functionality on the big screen instantly. USB plug-and-play means that no installation or configuration is required, with options to plug removable devices from the side or having them fixed from the back.

Whiteboard Mode

Inspire agile collaboration with whiteboard mode. Simply activate this feature to turn your display into a blank canvas that can be drawn on by multiple users by hand or with dedicated display pens. Everything on screen can then be sent to your laptop or preferred device for easy printing or file sharing.

Power and versatility

Android-powered Philips professional displays are fast, versatile and easy to navigate. The displays are optimised for native Android apps and come ready for web apps to be installed as well. Automatic updates ensure your apps run smoothly with the latest features and security patches. Better still, the C-Line 8051C can be combined with the Windows OPS PC, included for a true all-in-one solution.

Multi-Touch technology

Create a memorable interactive experience with up to 10 touchpoints at the same time. Perfect for collaborative and competitive applications, this display connects your audience with any content – making it ideal for corporate and office settings. This multi-touch display is also enabled with automatic touch recognition and a HID compliant USB connector for true plug-and-play operation.

interact

Display four feeds on one screen. Wireless screen sharing allows you to connect up to 64 devices at the same time for quick content switching when you need it. Use your existing Wi-Fi network to instantly and securely connect devices, or the Interact dongle to connect guest and off-site team members working from external networks.

Smarter by design

Engage your audience in any lighting condition. The Philips C-Line features a 4K screen with anti-glare and anti-reflection glass to ensure your content remains the focal point with zero distraction. And it's just as clever on the inside, with a plethora of intuitive features to help you focus on getting your tasks at hand done.

Crestron Connected certified

Integrate the Philips C-Line with your Crestron network for full remote control via your laptop, desktop or mobile device. Switch the display on and off, schedule content, manage settings, and easily connect external devices. Crestron Connected® provides a fast, reliable and secure enterprise level solution for wireless and wired content sharing from Apple, Windows, Android and Linux devices.

Co-creation

Bring the team together on one screen no matter where they are. The co-creation feature lets you open a virtual meeting so that you can collaborate with your clients and colleagues remotely on the same document.

High-end 4K display

Lifelike colours and deeper blacks are just the start. An edge-to-edge 4K IPS display gives a premium feel to any space for a powerful corporate image that's ahead of the competition. High-end capacitive touch technology ensures the absolute best touch experience with precision you can rely on when presenting to your team and clients.

Premium sound

Perfect sound completes a perfect picture. The Philips C-Line is equipped with powerful down-firing 2x20W RMS speakers to ensure high-quality audio with immersive results in large spaces such as presentation and meeting rooms. Audio settings are fully adjustable for precision sound balance, and a controllable audio output allows for easy integration into larger audio systems if needed.
