\*Devices not included in the preceding table have not undergone compatibility testing with Lumify. Philips cannot guarantee Lumify system performance with non-compatible devices as compatibility testing with all devices on the market is not feasible. The devices have been evaluated using the operating system (OS) versions they were originally equipped with.

Subsequent OS releases, known as maintenance releases, that are higher than the version installed at the time of device launch has not been explicitly verified. Conducting explicit tests for newer major OS releases on older devices, which were initially equipped with a previous OS version, is not feasible. Lumify system functionality and performance may be impacted if significant operating system changes have been applied.
