Soft glow night light

Soft glow night light

Free Fidelio app for Android

The Philips Fidelio app brings a myriad of unique features to Fidelio docking speakers. You can listen to thousands of Internet radio stations worldwide, browse through your music collection and share what you are listening to with friends via Facebook, or photos of the artist on Flickr. The app comes with Songbird music function, so you can discover, play and sync media seamlessly between PC and Android devices. In Clock mode, the app lets you set multiple customized music alarms and gives updated weather reports. Completely free, the app can be downloaded from the Android Market.

Songbird music network

Songbird is a simple, easy-to-use PC program and Android app. It lets you discover and play all your media, and sync it seamlessly with your PC. Its intuitive and powerful music management features let you discover new artists and music styles directly in the program through music and media stores, services and websites. Play your own library and media from the Internet and seamlessly sync all of it from your PC to your Android devices.

FlexiDock

The Philips FlexiDock is perfect for Android phones. Its patented design cleverly docks most of the Android phones - whether the phone's connection socket is at the bottom, on the side or even on the top. This extreme flexibility is the first of its kind, catering to Android phones that are made by different manufacturers with no standardized position and orientation for the micro USB connection socket. The dock also brilliantly adjustable to hold the phone in both portrait and landscape positions, letting you position your Android phone at the centre of the speaker.
